

PRESKO TOUCH KEYPAD & RFID PROX READER

New product.

PTKR

The Presco™ keyless access control system offers many advantages over other seemingly similar access control systems. The split system design has greater security by ensuring that wire tampering at the keypad or proximity reader does not control the door release output.

With a separation of up to 1 kilometre between the controller and keypad/proximity reader, Presco™ covers distances unachievable by most other two part systems.

FEATURES
